

CORK

A light, elastic, resilient and moisture-resistant material

In relation to the growing concern for the environment, the **cork oak** remains the only tree whose bark can regenerate after harvest, leaving the plant unchanged. In this sense, **cork** by **Granorte** is a totally eco-friendly product.

Furthermore, among the various peculiarities of this material (**lightness, elasticity, resilience, resistance to humidity** , etc.) we find its **recyclability** :

among the available decorations, for example, we find one in which bottle caps are distinguishable, collected and reused pressed into a single

block, subsequently sectioned (image on the side). Available in various colors.

The cork can be coupled with both the calcium sulphate support and the chipboard support in the 60×60 cm format.
